ABOUT ME

"I'm Sanjith M S, an IT professional from Kanyakumari, Tamil Nadu. Skilled in Java, Python, C, C++, HTML, and CSS, I am well-specialized in Android development and web development. With a strong academic foundation from Paavai Engineering College, I bring a decade of experience as a dedicated Android Developer. Connect with me on LinkedIn and explore my projects on GitHub."

EDUCATION

- Paavai Engineering College Namakkal
 - B-tech Information Technology
 - currently pursuing (2022-2026)
- Hindu Vidyalaya Matric Higher Secondary School Marthandam
 - HSC
 - Completed with 86% in 2022
 - SSLC
 - Completed with 90% in 2022

Projects

1.E-Commerce App

- "I collaborated on an exciting e-commerce app project with Raptech Solutions, my friend's company. This app is designed to simplify the process of obtaining Xerox copies —users can easily upload their documents, and the owner prints and delivers them directly. Additionally, the app offers a variety of college essentials for purchase, such as calculators, pens, pencils, and A4 sheets. We incorporated a wide range of features, including online payment options and robust authentication methods through Firebase, with support for Google, Facebook, and more.
- Over the course of three months, we successfully delivered the app to the client. As a key contributor to both backend and frontend design, I worked closely under the guidance of a senior developer. This experience significantly enhanced my skills and knowledge in app development."

2.Chat App

- "I developed a sophisticated app in Android Studio, leveraging Java for the backend. The app is packed with impressive features, including dynamic chat capabilities with precise user-controlled message deletion, real-time last seen tracking, and fully customizable profile photos. It also empowers users with the ability to effortlessly delete accounts, ensuring an unparalleled user experience. For seamless data management, I integrated Firebase, utilizing Firestore for database operations and Firebase Authentication for secure mobile login. With functionality reminiscent of popular platforms like WhatsApp and Telegram, my app offers a comprehensive communication solution. I've also made the entire project available on GitHub for easy access and collaboration."

3.Note App

- "I also developed a feature-rich notes app, built in Android Studio using Java for the backend. The app allows users to store notes with titles and content, seamlessly integrated with Firebase for secure storage. I implemented Firebase email-password authentication for sign-up, login, and email verification, ensuring a secure user experience. Users can effortlessly edit their notes or delete unwanted ones, with all their notes conveniently displayed upon login. This app is designed for maximum usability and efficiency, and I've made the entire project available on my GitHub profile for others to explore and collaborate on."
